Subject: Action items from 5/22 workshop

Good afternoon,

There was a request that we send out a list of the action items that were captured at the workshop yesterday. Please see the list below.

1. ICF will distribute a redline/strikeout version of Chapter 12 displaying changes made to the near-term impact analysis and impact conclusions regarding nesting habitat for the following species: Swainson's hawk; white-tailed kite; Cooper's hawk and osprey; and cormorants, herons, and egrets. We will also set up a meeting to discuss the preferred approach to revising the BDCP to avoid such near-term effects.
2. ICF will set up a meeting with the HCP team and agency staff to go over changes made to the BDCP and a strategy for incorporating them into the EIR/EIS.
3. ICF will develop a list of changes to the BDCP that we are aware will need to be updated in the EIR/EIS section and will send out this list.
4. ICF will request the Terrestrial Technical Team "task list" from HCP staff.

5. ICF will coordinate with DWR on the current approach to water transfer analysis and explore whether additional quantitative analysis is warranted.

Thanks,

Adam
